

Science and Technology Indicators

2008 NORWAY

Introduction

This booklet, containing tables and figures on R&D statistics and other science and technology indicators has been published annually since 1997. A broader coverage of S&T input and output figures is published in the *Report on Science and Technology Indicators for Norway 2007, The Norwegian Research Council, Oslo, 2008*. You may also find information at www.foustatistikkbanken.no. All expenditures are given in current prices, unless otherwise indicated. 1.00 PPP US\$ = 8.53 NOK in 2007 (Main Science and Technology Indicators 2007-2, OECD), by May 2007 1 Euro = 7.8 NOK.

Who prepares the R&D statistics?

NIFU STEP and Statistics Norway carry out the statistical surveys on resources devoted to R&D in Norway. NIFU STEP is responsible for collecting, processing and dissemination of statistics and indicators regarding the Institute and Higher education sectors, while Statistics Norway is responsible for the Industrial sector. NIFU STEP is also responsible for assembling the information into a total R&D statistics for Norway. For the Industrial and Institute sectors annual statistical surveys are carried out. For the Higher education sector the survey is carried out every second year. For all three sectors main figures are produced every year. Further information may be obtained at www.nifustep.no, with links to the report mentioned above, and at the home pages of The Research Council of Norway (www.rcn.no) and Statistics Norway (www.ssb.no/english).

How are R&D statistics compiled?

Norwegian R&D statistics are compiled in accordance with the international guidelines issued by the OECD. These guidelines are contained in the "Frascati Manual" (The Measurement of Scientific and Technological activities: Proposed Standard Practice for Surveys on Research and Experimental Development "Frascati Manual 2002", OECD 2002). The sections of this manual dealing with basic definitions and conventions of R&D have been translated to Norwegian by NIFU STEP (2004). Total R&D figures for Norway are available through administrative registers and questionnaires sent to the concerning units in the three performing sectors.

The survey on R&D activity in the **Industrial sector** contains all companies with 50 or more employees. In addition, the survey includes a number of selected companies with a minimum of 10 employees. Before 1995, the survey included only companies with 50 or more employees. The statistics on the Industrial sector from 1995 are therefore not comparable with those of the previous years.

The **Higher education sector** is thoroughly surveyed. Each individual department or corresponding equivalent unit is surveyed. University hospitals are also included in this sector. Supplementary sources of information include surveys on staff members' time distribution, information on personnel and expenditure from the institutions' central administration, the Research Council of Norway, and medical foundations.

The **Institute sector** is also covered by complete surveys. Questionnaires are sent to research institutes and other institutions that are expected to perform R&D activities. In addition, this sector includes non-university hospitals not included in the Higher education sector and estimates of R&D resources at museums.

Other data sources:

Statistics on **R&D personnel** in the Higher education and Institute sectors are based on NIFU STEP's register on Research personnel, scientists, and engineers. The register is updated every second year, annually from 2007. Data on **international R&D statistics** are extracted from the OECD's *Main Science and Technology Indicators*. The **doctoral degree statistics** are based on NIFU STEP's Norwegian doctoral degree register, which is updated biannually. Information about doctoral degrees in the Nordic and Baltic countries is found in **NORBAL**, a database operated by NIFU STEP on behalf of NordForsk. **Bibliometric data** are extracted from the database *National Science Indicators* prepared by the *Thomson Scientific* in the U.S. This database contains worldwide publication and citation statistics.

Basic definitions of Research and experimental development (R&D)

Research and experimental development (R&D) comprise creative work undertaken on a systematic basis in order to increase the stock of knowledge, including knowledge of man, culture and society, and the use of this stock of knowledge to devise new applications.

Three types of R&D may be distinguished:

- **Basic research** is experimental or theoretical work undertaken primarily to acquire new knowledge of the underlying foundation of phenomena and observable facts, without any particular application or use in view.
- **Applied research** is also original investigation undertaken in order to acquire new knowledge. It is, however, directed primarily towards a specific practical aim or objective.
- **Experimental development** is systematic work, drawing on existing knowledge gained from research and/or practical experience, which is directed to producing new materials, products or devices, to installing new processes, systems and services, or to improving substantially those already produced or installed.

Sector classification

In Norwegian R&D statistics, resources are classified in three performing sectors: *The Industrial sector*, *the Higher education sector*, and *the Institute sector*. The Norwegian classification somewhat differs from the OECD's: For international comparisons *Business enterprise sector* includes industry as well as non-profit institutes serving firms (these business-oriented institutes are included in the Institute sector in Norway). OECD's *Higher education sector* corresponds to the Norwegian classification, while its *Government sector* and *Private Non-Profit sector (PNP)* together cover the rest of the Institute sector in Norway. The PNP sector is rather small in Norway, and it is therefore included in the Government sector of OECD's statistics.

Highlights

- Total R&D expenditure in Norway amounted to 32.8 billion NOK in 2006, a raise from 29.6 billion NOK in 2005.
- R&D expenditure accounted for 1.52 per cent of the Gross Domestic Product (GDP) in 2005 and 2006.
- In Sweden, R&D expenditure accounted for 3.89 per cent of the GDP in 2005. Approximately three quarters of the R&D expenditure in Sweden was conducted in the Business enterprise sector, compared to 54 per cent in Norway.
- Norway spent 6410 NOK per capita on R&D in 2005. This was higher than France, Canada and the Netherlands, but still the lowest among the Nordic countries.
- Estimates for 2007 show that 7050 researchers in the Institute sector and 19 100 academic staff in the Higher education sector participated in R&D, compared to 6484 and 18 087 in 2005.
- Associate professors and full professors had the highest increase in numbers from 2005 to 2007.
- 32 per cent of the researchers in Norway were female in 2005, a higher share than Denmark, France and Japan. Portugal had the highest representation of women; 44 per cent.
- The share of women in the Norwegian Business enterprise sector (BES) was just over 20 per cent in 2005, lower than Iceland and Denmark. In the Higher education sector in Norway the share of women was higher than in Japan, France and Denmark.
- The representation of women in the Institute sector in Norway was 36 per cent in 2007, an increase from 34 per cent in 2005.
- Government budget appropriations for R&D (GBAORD) in Norway accounted for 0.7 per cent of the GDP in 2006. This amounts to 3228 NOK per capita, the highest GBAORD among the Nordic countries.
- Norway had the highest increase in the number of earned doctoral degrees per capita among the Nordic and Baltic countries from 2005 to 2006, while Denmark and Lithuania had the largest decrease.
- In 2007, more than 1000 doctoral degrees where awarded at Norwegian higher education institutions.
- Sweden, Finland and Denmark had the highest number of articles per 1000 inhabitants in 1997–2001 and 2002–2006. Norway had the highest increase in articles per 1000 inhabitants in the two periods, followed by Belgium and the Netherlands.

Table of contents

Tables

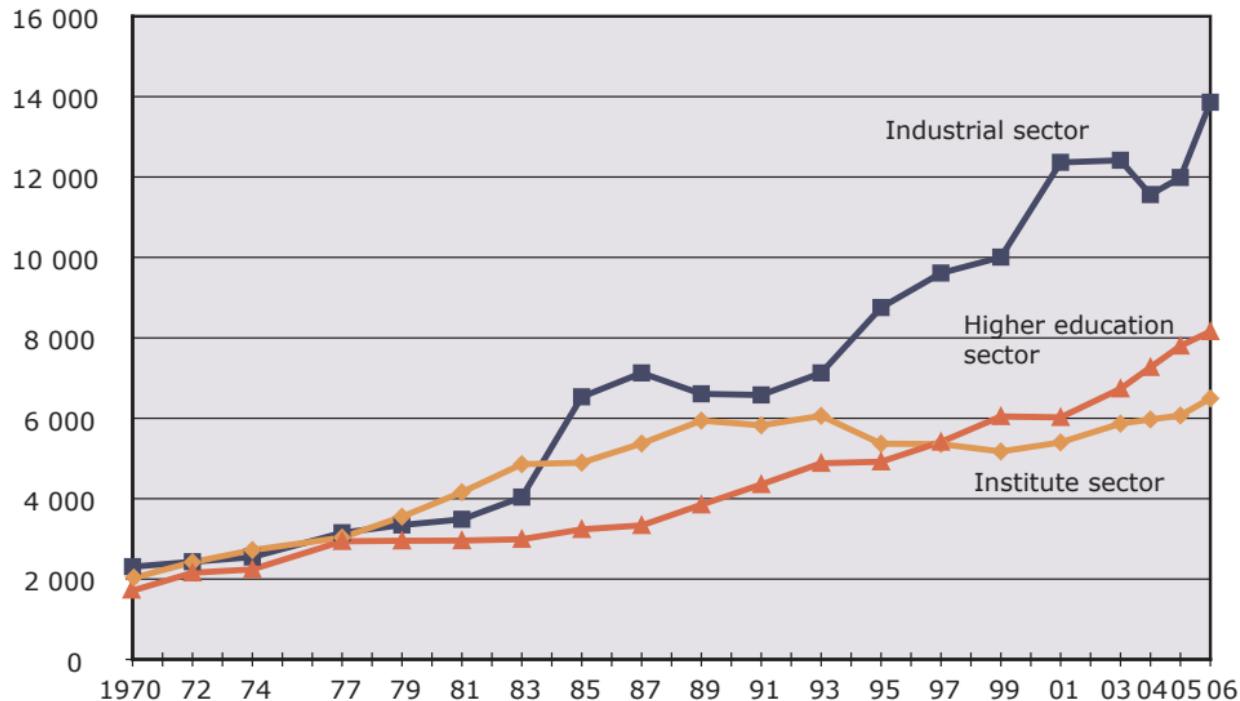

1. R&D expenditure in Norway by sector of performance and source of funds: 2005	8
2. R&D expenditure as a percentage of the Gross Domestic Product (GDP) by source of funds and sector of performance, as well as per capita (NOK) in selected OECD-countries: 2005	10
3. R&D personnel (head count) in Norway by sector of performance: 2005. Estimates for 2007	13
4. Tenured academic/professional staff paid by general university funds in the Higher education sector in Norway by position and type of institution: 2005 and 2007	14
5. R&D resources in the Industrial sector in Norway by industry: 2005 and 2006	20

Figures
